Managed Security Services

Modern cybersecurity requires continuous monitoring, skilled analysis, and rapid response — capabilities many internal teams struggle to maintain around the clock. BriteProtect extends customer security teams with managed detection and response, SOC expertise, alert triage, threat investigation, reporting, and response support.

By combining technology, process, and analyst expertise, Brite helps organizations improve visibility, reduce alert fatigue, and respond more effectively to security events.

Why Managed Security Services?

Extend Internal Teams
Provide security expertise, monitoring, and operational support that complements existing IT and security staff.

Improve Detection & Response
Identify, investigate, and escalate meaningful threats faster through 24/7 managed security operations.

Increase Security Program Consistency
Deliver repeatable monitoring, reporting, response workflows, and posture improvement over time.

24/7 SOC Monitoring
Continuously monitor customer environments for suspicious activity across endpoints, network, cloud, identity, and security tools.

Managed Detection & Response
Investigate alerts, correlate events, and guide containment or remediation actions when threats are identified.

BriteProtect Platform
Leverage BriteProtect's XDR-driven approach to aggregate, correlate, and analyze security telemetry across multiple sources.

Threat Hunting & Investigation
Proactively review suspicious behavior and investigate potential threats that may bypass individual security controls.

Client Reporting & Reviews
Provide consistent reporting, metrics, and security posture insights to support operational and executive visibility.
