

Assessments

Security programs require regular evaluation to remain effective. Brite helps organizations assess their current security posture, identify gaps, benchmark maturity, and prioritize improvements through technical assessments, risk reviews, compliance support, and vCISO advisory services.

These assessments help customers understand where they are today, where risk is concentrated, and what actions will most effectively strengthen their cybersecurity program.

Why Assessments?

Identify Security Gaps

Uncover weaknesses in controls, processes, configurations, policies, and technology coverage.

Benchmark Maturity

Evaluate cybersecurity capabilities against recognized frameworks, industry expectations, or compliance requirements.

Guide Security Investment

Create a practical roadmap that helps customers prioritize improvements based on risk, effort, and business value.

Security Posture Assessments

Review existing tools, processes, policies, and controls to identify areas for improvement.

vCISO Advisory

Provide strategic cybersecurity guidance, documentation support, policy development, and program oversight.

Vulnerability & Exposure Reviews

Evaluate technical vulnerabilities, misconfigurations, and high-risk exposures across customer environments.

Compliance Readiness Support

Assist with control mapping, documentation, reporting, and preparation for regulatory or framework-driven requirements.

Penetration Testing Coordination

Support or coordinate penetration testing through appropriate resources or partners when deeper validation is required.
