

Why Organizations Need A More Advanced MSSP

AI-driven attacks shorten the time between exposure and impact. BriteProtect combines intelligent detection, skilled 24/7 analysts, and mature response playbooks to help organizations identify, prioritize, and contain these types of threats faster.

Why Legacy Models Fall Short

- Too much alert noise and too little context equals slow decision making.
- Disconnected tools & manual handoffs create delays between detection investigation & containment.
- Human-only reactive monitoring.

What BriteProtect Delivers

BriteProtect is Brite's managed cybersecurity service. It brings together unified visibility across endpoint, network, cloud, and identity; AI-driven triage and enrichment to qualify suspicious activity faster; continuous 24/7 oversight from skilled analysts; and mature, customizable playbooks that support consistent, high-confidence response.

Unified Visibility & Correlation

Brings all activity into one place and highlights the biggest threats across your environment.

AI-Driven Triage & Correlation

Reduces false positives, accelerates investigation, and improves escalation quality.

24/7 Monitoring By Skilled Analysts

Adds continuous expert oversight, threat validation, and real-world judgment.

Mature, Customizable Playbooks

Ongoing remediation and operational discipline that reduce exposure before attackers can capitalize on gaps.

Customer Outcomes: Lower Exposure, Faster Response, Stronger Prevention, More Resilient Operations
