

Brite

Securing Work Beyond The Perimeter

Security teams shouldn't have to stitch their solutions together. As the preferred technology integrator of choice, Brite seamlessly combines and optimizes top cybersecurity tools that actually work better together to provide a more comprehensive cybersecurity defense.

One great example is the pairing of **Zscaler** and **CrowdStrike**, who team up to solve the challenges of a modern-day work environment.

Hybrid work has dissolved the perimeter and continues to reinvent the business landscape, leaving organizations with the complex task of securely enabling a distributed workforce from any location and on any device while protecting their business from cyber attacks.

Zscaler and **CrowdStrike** deliver an integrated zero trust security solution that simplifies endpoint to application security in a hybrid world. Expanding on core zero trust capabilities, this solution offers a suite of powerful new integrations that transform the security operations center (SOC).

Key Benefits

- Real-time device health metrics are used to enforce access policy to private and SaaS apps.
- Enforcement of access policy is based on the changing device posture over time.
- User, device, and network visibility to IOCs and automated workflow are converged as a holistic system, strengthening security posture.
- The ability to trigger device quarantining helps prevent malware from propagating after a user accesses malicious files.
- Increased visibility enables stronger reporting and remediation and maximizes an organization's ability to respond to the increasing volume of sophistication and attacks.

The Brite Difference

As a proud partner of both **Zscaler** and **CrowdStrike**, Brite will help you integrate either of these solutions into your current tech stack. We'll then optimize it for you so that you're up and running in no time without any hassle.

The **zscaler**™ + **CROWDSTRIKE** Advantage

- Delivers an end-to-end security solution that protects your organization from evolving threats.
- Enhances risk management and shortens response times.
- Combines security capabilities for robust enforcement of zero trust access from endpoint to application.

Brite goes beyond sourcing best-in-breed cybersecurity solutions. Our in-house, US-based Security Operations Center is available to co-manage those tools, delivering 24/7 enterprise-grade protection at scale. Choose Brite as your trusted partner, not only to recommend what works better together, but to make it work seamlessly.
