BritePROTECT

Enterprise-Grade Security Built For What's Next

A 24/7 Expert-Managed Cybersecurity Service

Stay Ahead of Evolving Threats with BriteProtect

Cyber attackers don't wait — and neither do we.

Every day, new threats emerge, security tools multiply, and security teams get stretched thin trying to connect the dots. That's when cyber risk creeps in.

BriteProtect changes that. Our managed cybersecurity service delivers round-the-clock protection, AI-driven detection, and rapid response from our US-based Security Operations Center (SOC), ensuring your business stays secure, resilient, and compliant.

Whether you want us to take the reins or work alongside your internal team, **BriteProtect** delivers the expertise, visibility, and speed needed to stay one step ahead, every hour of every day.

Don't leave your cybersecurity to chance - eliminate cyber risk with **BriteProtect!**

"The strategic foresight to partner with Brite is invaluable. The peace of mind to know we're protected and that the entire Brite team is there for anything is a huge burden off our team."

John Rizzo, RDG+Partners

Why Choose Brite To Manage Your Cybersecurity

Brilliant People
Our managed security services offer a talented team of US-based cybersecurity professionals dedicated to 24/7 alert monitoring and rapid response, ensuring your organization is always protected by turning insights into action within minutes, not hours.

Innovative Process
Our advanced, customizable process combines effective automation, rapid triage, and real-time threat intelligence, empowering your organization with proactive protection and swift incident response.

Industry-Leading Technology
BriteProtect leverages your existing tools and strengthens them with best-in-breed technology from partners like CrowdStrike, Palo Alto Networks, SentinelOne, Tenable, and Stellar Cyber. We integrate, optimize, and manage so your investments work smarter, not harder.

Trusted Transparency
Unlike most MSSPs, **BriteProtect** offers full visibility through our Open XDR (Extended Detection and Response) platform, the same unified console our analysts use daily. See every detection, response, and outcome in real time with regular communication from our analysts.

How Brite Will Secure Your Organization

24/7 Security Monitoring and Analysis: Cyber attacks are not limited to business hours. Let our managed security services team be your 24/7/365 proactive line of defense.

Robust Assessments and Reporting: Whether it is a baseline assessment or a continuous progress report, **BriteProtect** analysts document the current security posture, map ways to improve it, and consistently communicate.

Reliable Automations and Playbooks: Time is of the essence in any security incident. We utilize appropriate, customer-approved automations alongside proven playbooks to quickly stop attackers in their tracks.

Truly Co-Managed Platform: Our completely co-managed, web-based platform provides the same in-depth views, interactive dashboards, and analytical tools used by our analysts.

Built for Continuous Improvement: Through ongoing vulnerability management and penetration testing, we help you evolve your defenses before attackers evolve their tactics.

Managed Security Services Supported by BriteProtect

Managed Open XDR: 24/7 expert-managed detection and response, integrating with your current security investments for unified visibility and control.

Vulnerability Management: Continuously identify, assess, and remediate system weaknesses and configuration gaps.

Advanced Threat Protection: AI-driven defense and behavioral analytics that detect and stop sophisticated threats early.

Managed EDR: Centralized endpoint protection that prevents, detects, and remediates attacks across every device.

Zero Trust Access: Protect and connect your workforce with identity-based Zero Trust Network Access (ZTNA).

Continuous Penetration Testing: Simulate real-world attacks to uncover vulnerabilities before adversaries can exploit them.

User Awareness Education & Training: Empower your employees to identify phishing, social engineering, and emerging cyber risks.

Compliance Management: Maintain and demonstrate compliance with common industry frameworks through continuous monitoring and reporting.

Managed Backup & Recovery: Ensure your critical data is always protected, recoverable, and resilient to ransomware or disruption.

Firewall Management: Expert configuration, monitoring, and maintenance of firewall systems to ensure optimal protection of your network perimeter.

AI-Powered Email Security: Protect users from phishing, spoofing, and business email compromise with behavioral AI that learns communication patterns to detect and stop threats before they reach the inbox.

Open XDR & Automation: Simpler, Smarter Security

BriteProtect's Open XDR platform collects, correlates, and analyzes more data from more sources than any other system. Powered by proprietary Interflow technology, it captures network packets, security logs, and application data to create a rich, lightweight, and contextual dataset that is more detailed than NetFlow, yet far more efficient than full packet capture.

Each Interflow record combines user, host, and geolocation details with real-time threat intelligence from trusted sources such as Proofpoint, VirusTotal, and Homeland Security. The platform's AI-driven engine correlates this data across tools and environments, transforming raw information into actionable insights.

The result is a unified, intelligent security platform that streamlines operations, enhances visibility, and accelerates detection and response while reducing complexity and cost.

Built In, Not Tacked On

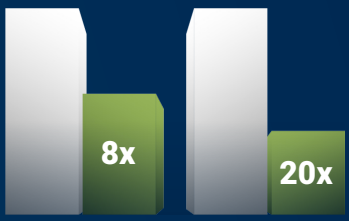
Did you know the average cost of a data breach is **$3.31 million** for businesses with less than 500 employees? **Most don't recover - would you?**

With so much at stake, you can't afford to leave cybersecurity to chance. Yet most MSSPs stack third-party tools onto existing systems, creating security gaps, higher costs, and unnecessary complexity, while leaving clients to manage the blind spots.

Brite does it better, delivering fully integrated cybersecurity as part of your managed security services, powered by our US-based Security Operations Center (SOC).

It's cybersecurity built in, not tacked on. **Faster, smarter, and seamless.**

AI-powered pre-built platform removes tool silos to improve **Mean Time To Detection >8x** and **Mean Time To Response >20x**



One Step Ahead: Brite's Proactive Approach To Cybersecurity

Having a strong cybersecurity defense isn't just about reacting swiftly to attacks that have already occurred. It's also about having effective measures in place that prevent cyber criminals from breaking in at all.

At **Brite**, we don't just wait for cyber criminals to act – we act first to keep you protected.

Our proactive approach involves staying up to date on the latest trends, employing cutting-edge technology, and having expert analysts on hand 24/7 to keep customers' systems safe. We also offer penetration testing as a service so we can help you identify and remediate any security issues you're currently facing.

By combining a human touch with best-in-breed, enterprise-grade cybersecurity tools and AI technology, we're able to wipe out threats before they become headlines.

Our Industry-Leading Partner Ecosystem

Brite delivers enterprise-grade cybersecurity to businesses of every size through a powerful network of top technology partners and a dedicated team of in-house experts who know how to make them work together. We help organizations identify gaps, select the right solutions, and integrate them seamlessly so every layer of your security stack performs at its best.

When full management isn't needed, **Brite** can co-manage alongside your internal team to expand bandwidth, visibility, and protection with follow-the-sun support from our US-based SOC. Whether you're looking to fill security gaps, overcome integration challenges, optimize your existing stack, or offload operational burden, **Brite** and its industry-leading partner ecosystem make enterprise cybersecurity achievable for all.

Brite is a trusted partner delivering integrated and scalable technology solutions that power safer, smarter, and more secure organizations and communities.

With people and technology at the core of everything we do, our expert team combines proven processes with thoroughly evaluated, industry-leading technologies to help teams operate securely, efficiently, and with confidence.

At Brite, we believe good enough is never enough. We're always striving to improve, build strong partnerships, and create meaningful value with every interaction. Whether it's through our people or our services, we aim to delight and support our customers every step of the way with **Brite People, Brite Solutions.**

"We are confident security-wise. I feel 100% supported from a customer service aspect. My employees feel it because it flows. The assistance we got during the transition and the lack of issues were perfect. So, you know, we're happy clients."
